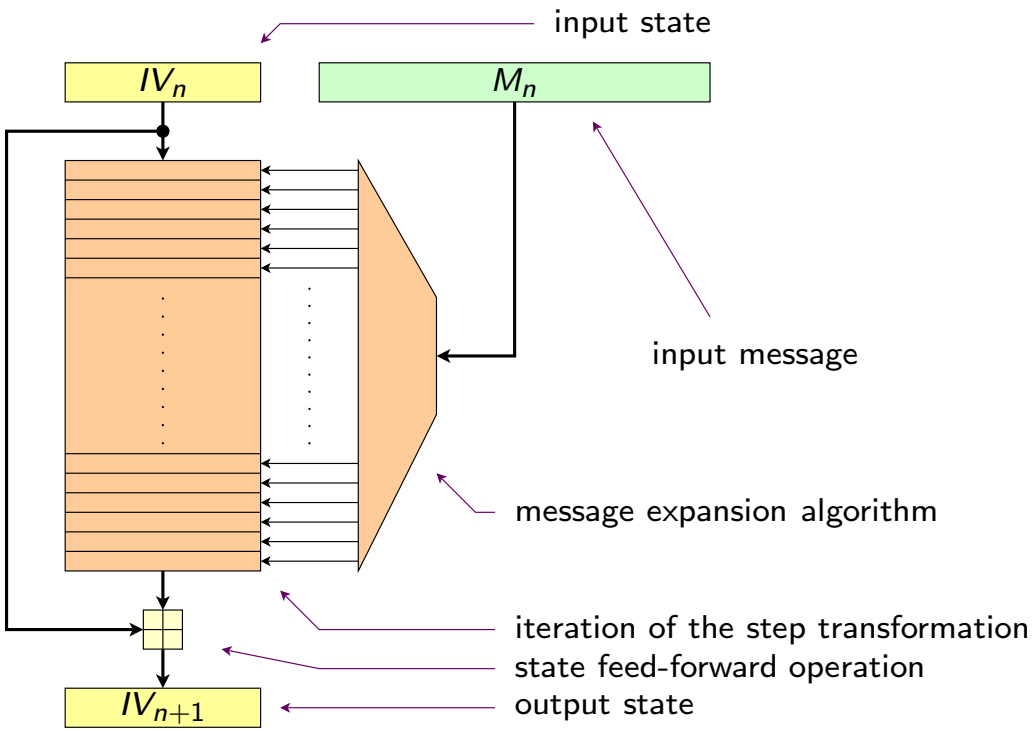
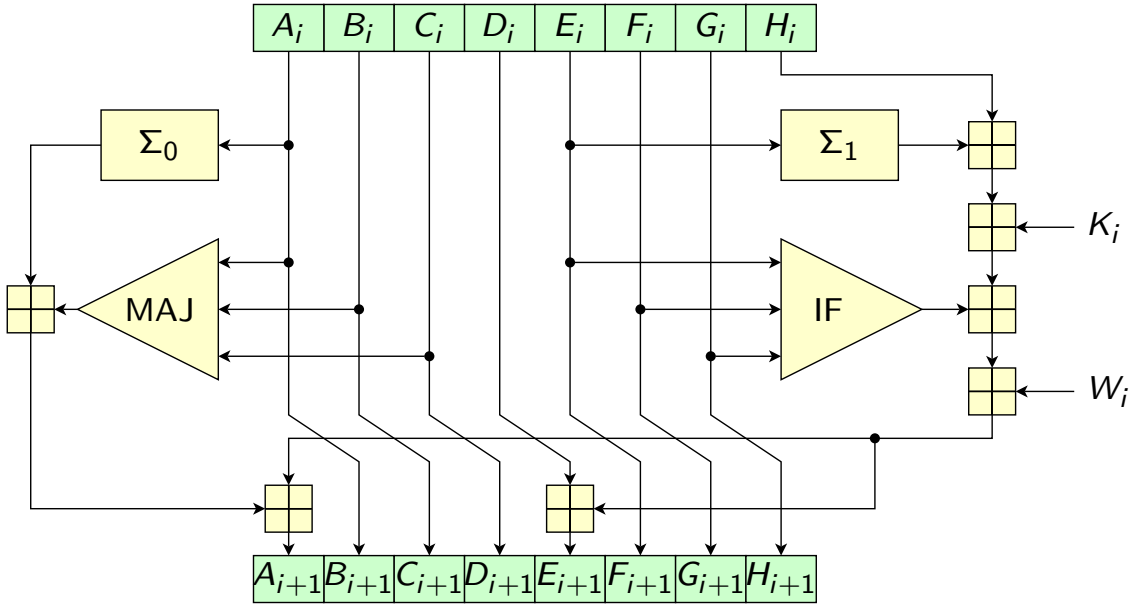
SHA-2 in General



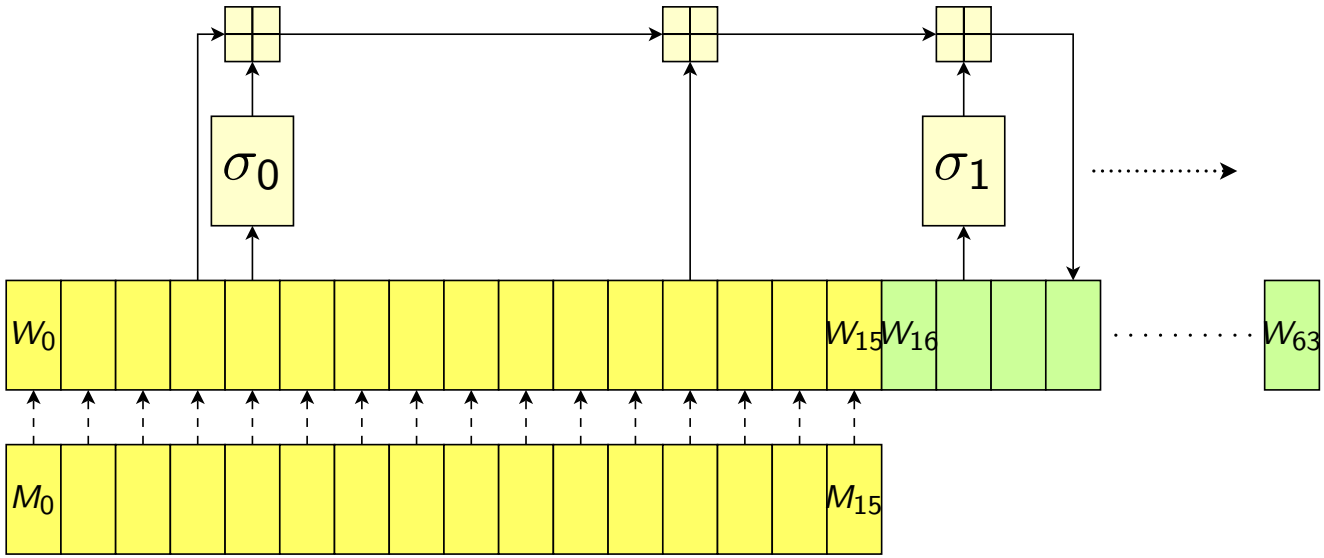
- Step Function: update internal chaining
- Message Expansion: expand 16 message words to 64/80

SHA-2 Step Function



$$\mathrm{MAJ}(A,B,C) = (A \wedge B) \vee (A \wedge C) \vee (B \wedge C) \ ,$$
$$\mathrm{IF}(E,F,G) = (E \wedge F) \vee (\neg E \wedge G) \ ,$$
$$\Sigma_0(x) = (x \ggg 2) \oplus (x \ggg 13) \oplus (x \ggg 22) \ ,$$
$$\Sigma_1(x) = (x \ggg 6) \oplus (x \ggg 11) \oplus (x \ggg 25) \ .$$

SHA-2 Message Expansion



$$W_i = \begin{cases} M_i & \text{for } 0 \leq i < 16 \ , \\ \sigma_1(W_{i-2}) + W_{i-7} + \sigma_0(W_{i-15}) + W_{i-16} & \text{for } 16 \leq i < 64 \ . \end{cases}$$

Note: any consecutive 16 determine all message words.
